Projects

Wealt-Home| Demo | Github

- It is a landing page for buying your house or renting a house using HTML, CSS, and JavaScript technologies
- A fully responsive landing page designed to assist users in buying or renting a house. The page offers a user-friendly interface, allowing potential homeowners and renters to browse property listings, compare options, and make inquiries directly through the website.
- Technologies Used:
- HTML: Structuring the content and layout of the page.
- CSS: Styling the page to create a modern, attractive, and fully responsive design across different devices.
- JavaScript: Adding interactivity, such as property search filters, image sliders, and dynamic content loading based on user input.

dataEsa [Demo](#) | [Github](#)

- A responsive landing page offering data extraction services from Saudi websites, factories, and e-commerce platforms. Users can request customized data such as company names, addresses, prices, images, and more.
- Technologies Used: HTML, CSS, JavaScript.
- Features:
- Service description and data categories.
- Custom request form for tailored data extraction.
- Responsive design for all devices.
- Outcome: A professional platform that simplifies data extraction requests, providing users with categorized and customized data as needed.
